SUMMARY

Full Stack Engineer with **5+ years of professional experience**, specializing in high-performance **Frontend development (5 years)** and **robust Java Backend engineering (3 years).** Proven track record of architecting scalable web applications using **React.js and Redux** while building secure, data-driven server-side solutions using **Spring Boot and Microservices**. Expert at optimizing system throughput, reducing latency, and delivering maintainable code within **Agile environments.**

WORK EXPERIENCE

Adiel technologies Pvt Ltd. Chennai | Remote
Software Engineer Feb 2023 – March 2026

➢ **Health Care Project** | Jan 2023 – Feb 2026

- **Developed and deployed scalable Microservices** using **Spring and Spring Boot**, ensuring high availability and system resilience.
- **Developed and maintained a robust Single Page Application (SPA)** using **React** and **TypeScript**, focusing on building type-safe, maintainable, and high-performance user interfaces.
- **Designed and implemented** secure **REST APIs** to facilitate seamless communication between the **frontend and backend services**.
- Leveraged **SQL and MongoDB** for efficient data persistence, complex query optimization, and data integrity.
- **Implemented dynamic and declarative routing** using **React Router DOM**. Customized the routing setup to build a **client-side authorization interceptor** that ensures validation and restricted access across all protected pages.
- **Managed application state globally using Redux**, implementing efficient reducers and actions to handle complex data flow across the application.
- **Styled the application with a modern, responsive design** utilizing **Tailwind CSS** for utility-first styling and **Material UI (MUI)** for professional, ready-made UI components, ensuring a consistent and accessible user experience.

Propanion India Pvt Ltd. Hyderabad | Remote
Associate Software Engineer Jan 2021 – Jan 2023

➢ **Clinical Hub Project** | Nov 2020 – Dec 2022

- **Engineered the Front-End** of a comprehensive **Hospital Management System (HMS)** using **React** and **TypeScript**, significantly improving code quality and minimizing runtime errors through strict type enforcement.
- **Developed a secure, role-based dashboard interface** for three distinct user roles (Admin, Doctor, and Receptionist), dynamically rendering navigation and components based on authorization levels to restrict access to sensitive patient data.
- **Created reusable, highly complex form components** for patient admissions, billing, and diagnosis entry. Integrated client-side validation using libraries like Formik or React Hook Form to enhance data integrity and user experience.
- **Optimized application performance** by implementing efficient data fetching strategies and memoization (using `React.memo` and `useMemo`) to reduce unnecessary re-renders in heavy-duty components like the appointment calendar.

SKILLS

Frontend: React, TypeScript, Redux, Vite, Material UI, Tailwind CSS, JavaScript, jQuery.
Backend: Java, Spring, Spring Boot, Microservices, REST API Design.
Databases: Mongo DB, MySQL
Version Control & CI/CD: Git, GitHub

EDUCATION

Bachelor of Commerce(Computers) Jun 2015 – Jun 2018
Telangana University | Telangana, India GPA: 7.1

PROJECTS

Health Care

Insurance Management System (IMS) Developed as a high-performance Full Stack application, this IMS leverages a **Java and Spring Boot** backend architected with **Microservices** to streamline policy, claims, and customer data management. The system utilizes **SQL and MongoDB** for robust data persistence of complex financial records and member profiles, while secure **REST APIs** facilitate seamless communication with **a React and TypeScript** frontend. Key features include a detailed Claims Processing module with dynamic form generation, a Policy Administration dashboard, and secure member portals, all managed by **Redux** to ensure data synchronization and integrity across the platform.
Role: Full Stack Engineer
Stack: Java, Spring Boot, Microservices, SQL, React (TS), Redux, REST APIs, MongoDB, Vite, Tailwind CSS

Clinical Hub

A comprehensive **Single Page Application (SPA) Hospital Management System** developed using **React and TypeScript** to modernize hospital operations. The system features a **secure, role-based dashboard** for Admins, Doctors, and Receptionists, restricting access to sensitive patient data. It utilizes **Redux** for centralized state management of critical data like appointment schedules and patient records, and is styled with **Tailwind CSS** for a responsive, modern interface.
Role: Front End Developer
Stack: React (TS), Vite, Redux, Tailwind CSS, Material UI, React Router, HTML, CSS, Mongo DB, Rest API's

Teck Jobs Job Portal | Live

Designed and prototyped the user interface (UI) and user experience (UX) for **TeckJobs**, a modern job portal application. Focused on creating an intuitive and visually striking **homepage** that utilizes a **dark theme** for high contrast and features a prominent job search functionality. Key design elements include a clear navigation bar, a compelling hero section with a strong call-to-action and a simplified search bar (Job Title, Job Type) for immediate user engagement. The design incorporates **3D/illustrated assets** to enhance visual appeal and create a friendly, inviting atmosphere.
Role: Personal project
Stack: React (TS), Vite, Redux, Tailwind CSS, Material UI, React Router, HTML, CSS, Mongo DB, Netify

Tesla Catalog | Live

This project involved engineering an interactive, high-fidelity hero slider component using React to showcase various Tesla vehicle models and specifications. The core implementation leveraged react-transition-group to manage complex, directional slide animations and smooth transitions between car models. I utilized advanced CSS/Sass and dynamic CSS variables to create a custom theming engine, allowing the button color, car shadow, and background glow to instantly update with the active slide.
Role: Personal project
Stack: React, Redux, HTML, CSS, Boot Strap, Tailwind CSS, Vercel, Netify

True Weather | Live

True Weather gives you the most accurate forecast for your exact location, eliminating surprises. Our real-time radar and minute-by-minute updates ensure you're always prepared for rain or shine. Key features include Geolocation API integration for immediate local weather and a search function for global locations, displaying data like temperature, humidity, and wind speed.

Role: Personal project

Stack: React, Redux, HTML, CSS, Boot Strap, Tailwind CSS, Axios, API’s, Vercel
